

DEKRO PAINTS

FAIRVILLE MANOR CASE STUDY

Fairville Manor in Tamboerskloof, recently underwent an extensive external revamp, adding a new lease of life to the apartment complex. The project was completed by Thermal Dynamix Contractors using Dekro's Environmentally Friendly product range.

INTRODUCTION:

Dekro's Green Generation Products, labelled with the Dekro Daisy indicating that it is friendly to both us and our environment. The products have been specifically formulated to contain zero levels* of any harmful substances including VOC's, APEO, MEG, Formaldehyde, Ammonia and Solvents.

The "Dekro Daisy" will become Dekro's way of informing their clients and the market that the product they are buying is green and free of harmful substances. Initially it will be displayed only on the seven new green products, but as we roll out the green concept into existing formulations and products this will be indicated by the "Dekro Daisy" logo on the packaging.

PROJECT DETAILS:

Walls were high pressure washed to remove all delaminating coatings, dirt, dust and grime. A full primer coat of Dekro Plaster & Masonry primer, (which is an alkali resistant water based primer) was applied to provide good adhesion for the new coatings and to prevent chalkiness.

Fibre Reinforced was applied over all horizontal surfaces to prevent moisture ingress and two coats of Dekro Xterior Guard for flexibility, durability and washability were applied to the external walls.
